 MC - Mandatory Course.

<b>U19EGE01</b>	<b>TECHNICAL ENGLISH</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	(Common to all Branches)	<b>2</b>	<b>0</b>	<b>2</b>	<b>3</b>

**Pre-Requisites** : None

**Objectives:**

To make the students to

- learn technical and non- technical vocabulary in speaking and writing
- read and comprehend engineering and technical texts
- learn the required format for business and official communication
- familiarize technical communication portfolio
- practice to speak and write in English

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : use more technical and non- technical vocabulary in speaking and writing

**CO2** : read and comprehend engineering and technical texts

**CO3** : the required format for business and official communication

**CO4** : apply technical communication portfolio wherever necessary

**CO5** : will be able to speak and write in English

**Unit I INTRODUCTION TO TECHNICAL ENGLISH 6**

Listening: Listening to scientific and technical talks. Speaking: Self Introduction, introducing others. Reading: Skimming and scanning the text and finding the answers for the given questions. Writing: Parts of speech, word Formation- prefix and suffix, One word Substitutes, Synonyms & Antonyms, Countable and Uncountable Nouns, technical Paragraph Writing, short essays related to various fields of engineering.

**Unit II WORDS AND SENTENCES 6**

Listening: Listening to longer technical talks and completing exercises based on that. Speaking: Describing a process, Reading: Note making on the given text. Writing: Matching words and phrases, Different forms of words, Types of sentences, Direct and Indirect Speech. instructions, Recommendations

**Unit III ENGLISH FOR BUSINESS COMMUNICATION 6**

Listening: Listening to talks on latest technology. Speaking: Giving summary of an article. Reading; Reading technical texts Journals/ Articles. Writing; - tenses, question tags. Writing reports, report on various projects, Formal Letter- business letter- calling for quotation, placing orders.

**Unit IV TECHNICAL COMMUNICATION PORTFOLIO 6**

Listening: Listening to documentaries. Speaking: Discussion on the documentaries related to the documentaries listened. Reading: Reading for technical information and comprehending. Writing: Gerund, Technical vocabulary, 'If conditionals, Expansion of compound nouns, writing notice, e-mails, Agenda & Minutes of Meeting.

**Unit V ESSENTIAL SOFTSKILLS FOR ENGINEERS 6**

Listening: Listening to TED talks. Speaking: Group Discussion. Reading; Pre Reading and post reading and answering comprehension questions. Writing: Gap fillers, Punctuation for effective writing, collocations, Active and Passive voice, Formal Letter- official letter Article Writing for journals

**Total Periods: 30**

**List of Exercise:**

1. Listening to scientific and technical talks
2. Speaking: Self Introduction, introducing other
3. Listening to longer technical talks and completing exercises based on that.
4. Speaking: Describing a process,
5. Listening to talks on latest technology.
6. Speaking: Giving summary of an article
7. Listening to documentaries
8. Speaking: Discussion on the documentaries related to the documentaries listened.
9. Listening to TED talks
10. Speaking: Group Discussion.

**Total Periods: 30****Text Books:**

<b>S. No.</b>	<b>Author(s)</b>	<b>Title of the Book</b>	<b>Publisher</b>	<b>Year of Publication</b>

**U19MAT01****ENGINEERING MATHEMATICS - I****L T P C**

(Common to All Branches)

**3 1 0 4****Pre-Requisites** : Concepts of basic matrices, differentiation and integration**Objectives:**

- Interpret the introductory concepts of matrices which will enable the students to model and analyze physical phenomenon involving the multidimensional variable.
- Demonstrate the methodologies involved in solving problems using Jacobian method (at later stage).
- Understand differential calculus through geometrical interpretation.
- Exemplify the concepts of integration through various techniques.
- Develop enough confidence to identify the modern mathematical pattern in real world and offer an appropriate solution using the skills learned in their interactive and supporting environment.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Apply the knowledge of matrices to solve the problems for respective areas of specialization**CO2** : Implement the various differentiation and integral techniques in solving the system.**CO3** : Apply the knowledge of calculus that are essential for engineering and technology.**CO4** : Explore the basic concepts of integration methods through geometrical representation.**CO5** : Evaluate the functions to get the surface area and volume using multiple integrals.**Unit I MATRICES****9+3**

Linear Independence and dependence, Determinant, Gramer's rule. Eigen values and eigenvectors of a real matrix, Properties of eigenvalues and eigenvectors, Cayley – Hamilton theorem (statement), Orthogonal matrices, Application- Elastic Membrane.

**Unit II FUNCTIONS OF SEVERAL VARIABLES****9+3**

Limits and Continuity (Geometrical interpretations) – Properties of continuous function – Partial derivatives-Total derivatives- Jacobians - Taylor's series for two variables.

**Unit III DIFFERENTIAL CALCULUS****9+3**

Curvature of a curve (Cartesian co-ordinates), centre and radius of curvature, circle of Curvature, Cartesian coordinates - Evolutes, Envelopes of family of curves.

**Unit IV INTEGRATION METHODS****9+3**

Basic integration formulae for algebraic and transcendental functions- Integration by special devices: Integration by parts – rationalizing substitution or trigonometric substitution-partial fraction – reduction formula's – Improper integrals.

**Unit V MULTIPLE INTEGRALS****9+3**

Double integration (Cartesian coordinates)-Region of integration, Triple integration in Cartesian Coordinates -Meaning and Application.

**Total Periods 45+15=60****Text Books:**

S. No.	Author(s)	Title of the Book	Publisher	Year of Publication
1.	B.S.Grewal	Higher Engineering Mathematics	Khanna Publishers, 43 <sup>rd</sup> Edition Delhi	2015
2.	E.Kreyszig	Advanced Engineering Mathematics	John Wiley and Sons (Asia) Ltd, Tenth Edition. Singapore	2015

3.	C.Ray.Wylie, Loui's C.Barrett	Advanced Engineering Mathematics, 6 <sup>th</sup> edition	McGrawhill, 6 <sup>th</sup> edition, New Delhi	2014

U19CYE01

**APPLIED CHEMISTRY**

(Common to CIVIL, MECH and MCT)

L	T	P	C
3	0	2	4

**Pre-Requisites** : Nil

**Objectives:**

To make the students

- understand the requirements of Boiler feed water, its problems and water treatment methods.
- familiar with the manufacture and properties of various engineering materials.
- learn the principles and generation of energy in solar cells, fuel cells and batteries.
- understand the basic concepts of phase rule and its application to one and two component systems and appreciate the purpose and significance of alloys.
- familiar with the nature of fuels and its combustion.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : explain the various water treatment process, which make it fit for industrial and domestic purpose.

**CO2** : explain methods involved in the synthesis of different engineering materials and its properties.

**CO3** : analyse various sources of energy and its storage in different batteries, which find its application in society including engineering fields.

**CO4** : explain the principles involved in alloying metals and also its properties.

**CO5** : analyse the combustion characteristics in engines and apply them in the design of combustion chambers.

**Unit I WATER TECHNOLOGY 9**

Hardness of water-types -expression-units-estimation of hardness of water by EDTA-numerical problems-boiler feed water-disadvantages of hard water in boilers-boiler troubles (scale & sludge, boiler corrosion)-water treatment zeolite process, Ion exchange process-desalination-reverse osmosis-instrumental methods for water analysis-AAS, flame emission spectroscopy and photocolourimetry.

**Unit II ENGINEERING MATERIALS 9**

Refractories-classification-properties (refractoriness, RUL, dimensional stability, thermal spalling, thermal expansion, porosity)-manufacture of silica and magnesite bricks-Abrasives-classification-properties-manufacture of SiC, alundum, norbide-Portland Cement-manufacture (wet process)-properties-setting and hardening of cement special cement-alumina cement and water proof cement.

**Unit III ENERGY SOURCES AND STORAGE DEVICES 9**

Energy sources-types-nuclear energy-nuclear fission-controlled nuclear fission-nuclear fusion-nuclear reactor power generator-breeder reactor-solar energy-solar energy conversion-wind energy-Batteries - primary (alkaline battery) - Secondary (lead storage battery, NICAD battery and lithium ion battery)-Fuel cells (H<sub>2</sub> -O<sub>2</sub> , direct methanol and solid oxide)-super capacitors.

**Unit IV PHASE RULE AND ALLOYS 9**

Phase Rule: Introduction-definition of terms with examples-one component system-water system-reduced phase rule – thermal analysis and cooling curves-two component system-lead-silver system-pattinson process.

Alloys: Introduction-definition-properties of alloys-significance of alloying, functions and effect of alloying elements-ferrous alloys (Nichrome and Stainless steel)-Heat treatment of steel-non ferrous alloys (Brass and Bronze).

**Unit V FUELS AND COMBUSTION 9**

Fuels: Introduction-classification of fuels-coal-analysis of coal (proximate and ultimate)-carbonization- manufacture of metallurgical coke (Otto Hoffmann method)-petroleum-manufacture of synthetic petrol (Bergius process)-knocking-octane number-diesel oil-cetane number-natural gas-compressed natural gas (CNG)-liquefied petroleum gases (LPG)-power alcohol and bio diesel.

Combustion of fuels: Introduction-HCV and LCV-theoretical calculation of calorific value-ignition temperature explosive range-flue gas analysis (gas chromatography).

**Total Periods : 45**

**List of Experiments:**

1. Estimation of Total, Temporary and Permanent Hardness of Water Sample by EDTA method.
2. Determination of DO content in Water by Winkler's method.
3. Determination of strength of acids in a mixture using conductivity meter.
4. Determination of strength of an acid using pH meter.
5. Estimation of iron content of the given solution using potentiometer.
6. Determination of calcium oxide in cement.
7. Estimation of Iron in a given sample by photolorimetry.

**Total Periods : 30**

<b>U19ECT01</b>	<b>ELEMENTS OF ELECTRICAL, ELECTRONICS AND INFORMATION SCIENCE</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
-----------------	--	----------	----------	----------	----------

(Common to Mechanical, Civil, Mechatronics)	<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>
---	----------	----------	----------	----------

**Pre-Requisites** : Mathematics and Physics at 10+2 level or equivalent level

**Objectives:**

- To understand the fundamental concepts of circuit elements, electrical connections, laws and networks.
- To realize the operational behaviour of semiconductor devices
- To impart the concepts of digital electronics.
- To categorize various types of communication systems.
- To Familiar with the concepts in Emerging fields of computer science.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Apply knowledge of fundamental concepts of circuits in engineering domains

**CO2** : Understand and apply the concepts of semiconductor devices in engineering field

**CO3** : Apply knowledge of digital electronics in engineering domain

**CO4** : Understand different communication systems

**CO5** : Get an exposure about various emerging areas

<b>Unit I</b>	<b>Electric Circuits</b>	<b>9</b>
---------------	--------------------------	----------

Circuit Elements – Voltage, Current, Power and Energy, R, L and C - Series and parallel connections, Energy Sources, Source Transformation, Voltage division, Current division, Ohm’s Law, Kirchhoff’s Law – Voltage law, Current Law. Star and Delta Transformation, Power in series and parallel circuit.

<b>Unit II</b>	<b>Analog Electronics</b>	<b>9</b>
----------------	---------------------------	----------

Diode - Characteristics & Applications (Zener Diode, LED, Photo diode Rectifier, Clipping circuits.). BJT Transistor and its configuration, Transistor applications. Op-amps characteristics-Inverting and Non-inverting amplifier-Instrumentation amplifier as signal conditioning Circuit.

<b>Unit III</b>	<b>Digital Electronics</b>	<b>9</b>
-----------------	----------------------------	----------

Introduction to numbers systems, basic Boolean laws, logic gates. Universal gates, Combinational circuit (Half-Adder, Full-Adder, Decoder), Sequential Circuit - Latch, Flip-Flop, Counters and Registers, Introduction to CMOS - Design of Universal gates using CMOS logic.

<b>Unit IV</b>	<b>Communication Fundamentals</b>	<b>9</b>
----------------	-----------------------------------	----------

Analog Communication-Need for Modulation- AM and FM modulation. Introduction to Digital Communication-Sampling and Quantization-PCM; Digital Modulation -ASK, FSK, PSK. Introduction to Wireless Technology-Wifi, ZigBee, Bluetooth

<b>Unit V</b>	<b>Computer and Information Technology</b>	<b>9</b>
---------------	--	----------

Introduction: Artificial Intelligence, Cloud Computing, Big data Analysis, Parallel Computing, Cyber Security, Machine Learning, IoT.

<b>Total Periods:</b>	<b>45</b>
-----------------------	-----------

**U19MET01**

**Engineering Graphics**

(Common to MCT, MECH, CIVIL)

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>2</b>	<b>0</b>	<b>4</b>	<b>4</b>

**Pre-Requisites** : None

**Objectives:**

- To develop in students, graphic skills for communication of concepts, ideas and design of engineering products.
- To expose them to existing national standards related to technical drawings.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Perform free hand sketching of basic geometrical constructions and multiple views of objects.

**CO2** : do orthographic projection of lines and plane surfaces

**CO3** : draw projections and solids and development of surfaces

**CO4** : Prepare isometric and perspective sections of simple solids.

**CO5** : Demonstrate computer aided drafting.

**Unit I Projection of Points, Lines and Plane Surfaces 9**

Orthographic projection- principles-Principal planes-First angle projection-projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes - Determination of true lengths and true inclinations by rotating line method. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

**Unit II Projection of Solids 9**

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to one of the principal planes by rotating object method.

**Unit III Projection of Sectioned Solids and Development of Surfaces 9**

Sectioning of above solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – Prisms, pyramids cylinders and cones.

**Unit IV Free Hand Sketching 9**

Visualization concepts and Free Hand sketching: Visualization principles –Representation of Three Dimensional objects – Layout of views- Free hand sketching of multiple views from pictorial views of objects.

**Unit V Isometric and Perspective Projections 9**

Principles of isometric projection – isometric scale –Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions and conversion of orthographic views to isometric. Introduction to perspective projection of simple solids- Prisms, pyramids and cylinders.

**Total Periods: 45**

<b>U19EEP01</b>	<b>ENGINEERING PRACTICES LABORATORY</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	(Common to All Branches)	<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Pre-Requisites** : None

**Objectives:**

To make the students to

- To know about the usage of appropriate tools and equipment's used in plumbing and carpentry
- To acquaint metal joining process
- To understand working methodologies in lathe and sheet metal.
- To impart knowledge in electrical wiring concepts for house hold and calculations of power and energy.
- To familiarize with various electronic components and equipments.
- To learn the basic skills of soldering electronic components and wires

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Use proper tools for plumbing and carpentry.

**CO2** : Join metals using arc welding.

**CO3** : Create models in sheet metal and perform basic machining operations in lathe.

**CO4** : Carry out basic home electrical works and measure electrical quantities.

**CO5** : Possess the knowledge on various electronics components and equipments.

**CO6** : Elaborate on soldering practices.

**List of Exercise:**

**MECHANICAL AND CIVIL ENGINEERING PRACTICES**

1. Study of plumbing and carpentry components of residential and industrial building
2. Hands-on-exercise: Wood work, joints by sawing, planing and cutting
3. Preparation of butt joints, lap joints and T- joints by metal arc welding
4. Study of Lathe, centrifugal pump and air conditioner
5. Hands-on-exercise: Simple Turning, Taper Turning and Drilling Practice
6. Sheet Metal Works: Model making – Trays and funnels

**ELECTRICAL AND ELECTRONICS ENGINEERING PRACTICES**

1. Residential house wiring and staircase wiring.
2. Measurement of power and energy
3. Measurement of earth resistance
4. Study of different types of electronic components resistors, capacitors, inductors, function generator and DC power supply.
5. Study of CRO and measurement of AC signal parameter (peak-peak, rms period, frequency).
6. Soldering practice using general purpose PCB

**Total Periods: 30**

**U19EGE02**

**COMMUNICATIVE ENGLISH**

**L T P C**

(Common to all Branches )

**2 0 2 3**

**Pre-Requisites** : None

**Objectives:**

To make the students to

- know the importance of listening skill for effective communication
- practice conversation and public speaking in English
- prepare for competitive examinations
- comprehend the format of business communication
- gain knowledge on communication abilities and language skills

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : communicate effectively

**CO2** : do public speaking

**CO3** : take up competitive examinations

**CO4** : communicate officially

**CO5** : master the language

**Unit I INTRODUCTION TO COMMUNICATIVE ENGLISH 6**

Listening: Listening to longer texts and filling up the table. Speaking: Describing a product. Reading: Reading Biography/ Autobiography of Scientists/ eminent personalities and answering the questions. Writing: simple, Compound and Complex sentences, One word Substitutes, Essay Writing.

**Unit II ENGLISH FOR COMPETITIVE EXAMS 6**

Listening: listening to personal information. Speaking: Sharing personal information (likes and dislikes), Reading: Reading scientific blogs- projects related to engineering. Writing; Sample questions from International English Language Testing System (IELTS), Test of English as foreign language (TOEFL) & Civil Service (Language related)

**Unit III FORMAL COMMUNICATION 6**

Listening: Listening to formal conversation, Speaking: Role- play. Reading: Cloze Reading. Writing: Preposition, Phrasal Verbs, Singular or Plural Words, Degrees of Comparison, Job Application- Cover letter and Resume, Writing Circulars

**Unit IV VERBAL AND NON- VERBAL COMMUNICATION 6**

Listening; Listening to Mock Group Discussion and evaluating. Speaking: Making Presentation on the given topic Reading; Interpreting pictures and graphs- pie chart, flow chart, bar diagram and line graph. Writing: Infinitives and Gerunds, Regular and Irregular Verbs, Indefinite and Definite Articles

**Unit V LANGUAGE SKILLS 6**

Listening to Interviews. Speaking: Discussing company information/ describing the given data, trends and sales, Problem Solving techniques, Reading: Reading essays on global warming and other prevailing social issues. Writing: Contractions, Conjunctions or 'Joining Words, Subject -Verb Agreement, Proposal writing, Poster making

**Total Periods: 30**

**List of Experiments:**

1. Listening to longer texts and filling up the table.
2. Speaking: Describing a product.
3. Listening to personal information.
4. Speaking: Sharing personal information (likes and dislikes)
5. Listening to formal conversation
6. Speaking: Role- play.
7. Listening to Mock Group Discussion and evaluating.
8. Speaking: Making Presentation on the given topic
9. Listening to Interviews.
10. Speaking: Discussing company information/ describing the given data, trends and sales, Problem Solving techniques

**Total Periods: 30**

**U19MAT02****ENGINEERING MATHEMATICS - II**

(Common to All Branches)

**L****T****P****C****3****1****0****4****Pre-Requisites** : Concepts of Differentiation and Integration**Objectives:**

- Understand the concepts of gradient, divergence and curl through vector differentiation.
- Distinguish line integral, double integral, triple integral using vector integration.
- Interpret the solution of second order differential equation.
- Exemplify the concept of Laplace transforms that converts time domain to frequency domain.
- Represent the concept of inverse Laplace transform for engineering problems.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Compute gradient, curl and divergence using vector differentiation.**CO2** : Evaluate line integral, double integral and volume integral using vector integration.**CO3** : Analyze and model the real time problems using differential equations.**CO4** : Apply the knowledge of Laplace transforms for periodic functions.**CO5** : Analyze and model the differential equations using Laplace transform.**Unit I VECTOR DIFFERENTIATION****9+3**

Vector of scalar fields, directional derivative, gradient of a scalar field, surfaces, scalar potential, divergence and curl- Line integrals and independent of path, conservative vector fields-work done by a force.

**Unit II VECTOR INTEGRATION****9+3**

Double integrals, surface integral-flux, Green's theorem, triple integral- Gauss divergence theorem-Stoke's theorem

**Unit III LINEAR DIFFERENTIAL EQUATION OF SECOND ORDER****9+3**

Linear equations of second order with constant and variable coefficients (Euler, Cauchy's and Legendre's), Method of variation of parameter-Applications:electric circuit.

**Unit IV LAPLACE TRANSFORM****9+3**

Laplace transform: Linearity, shifting, transform of derivatives and integrals, Periodic function.

**Unit V INVERSE LAPLACE TRANSFORM****9+3**

Inverse linear transform: Convolution theorem (Statement only), partial fraction, unit step and impulse function, Initial and Final value theorem, (Statements) Applications: differential equations.

**Total Periods 45+15=60****Text Books:**

**U19PYE02**

**APPLIED PHYSICS**

**L T P C**

(Common to CIVIL, MECH and MCT)

**3 0 2 4**

**Pre-Requisites** : None

**Objectives:**

To make the students to

- know about the elastic properties of materials.
- understand the different aspects of sound and production of ultrasonic.
- comprehensive knowledge about diodes and identify its terminals.
- learn to apply the lever rule to determine the percentage of Phase present in ferrous alloys .
- understand the concept of ceramics, composites, metallic glasses and shape memory alloys.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : apply the elastic properties of materials in engineering design.

**CO2** : analyze the aspect of sound in audio and noise control industries.

**CO3** : explain the types of semiconductors and its applications in electronic devices.

**CO4** : apply the principle of iron carbon diagram to determine the phases in ferrous alloy materials in steel industries.

**CO5** : select appropriate materials for latest automotive and aerospace industries.

**Unit I Properties of Matter 9**

Elasticity – Stress-strain relationship - factors affecting elastic modulus and tensile strength – twisting couple - torsion pendulum: theory and experiment - bending of beams - bending moment – cantilever: theory and experiment – uniform and non-uniform bending: theory and experiment - Mechanical properties of Engineering materials - Tensile strength, Hardness, Fatigue.

**Unit II Acoustics and Ultrasonics 9**

Classification of sound- decibel- Weber–Fechner law – Sabine’s formula (No derivation) - Absorption Coefficient and its determination –factors affecting acoustics of buildings (Optimum reverberation time, loudness, focusing, echo, echelon effect, resonance and noise) and their remedies. Ultrasonics – Principle- - Production of ultrasonic’s by Magnetostriction and piezoelectric methods-Non Destructive testing – pulse echo system through transmission and reflection modes.

**Unit III Semi Conducting Materials 9**

Elemental and compound semiconductors - intrinsic semiconductors: carrier concentration – electrical conductivity band gap. Extrinsic semiconductors: carrier concentration - variation of Fermi level. Hall effect: theory and experimental determination -applications of Hall effect, Light emitting diode, Photo diode.

**Unit IV Phase Diagrams and Ferrous Alloys 9**

Solid solutions – Hume Rothery's rules – the phase rule – single component system – one component system of iron – binary phase diagrams – isomorphous systems – the tie-line rule – the lever rule – isomorphous system – eutectic phase diagram – free energy composition curve for binary systems – microstructural change during cooling. The iron – carbon equilibrium diagram phases, invariant reactions – eutectoid steel, hypo and hypereutectoid steels.

**Unit V Advanced Materials 9**

Ceramics – types and applications – Composites – classification, role of matrix and reinforcement, processing of fiber reinforced plastics - Metallic glasses: types , glass forming ability of alloys, melt spinning process, applications -shape memory alloys: phases, shape memory effect, pseudoelastic effect, NiTi alloy, applications .

**Total Periods: 45**

**List of Experiments:**

1. (a) Determination of Wavelength, and particle size using Laser.  
(b) Determination of acceptance angle in an optical fiber.
2. Determination of Young's modulus by uniform bending method.
3. Determination of thickness of a thin wire by Air wedge method.
4. Determination of thermal conductivity of a bad conductor–Lee's Disc method.
5. Determination of wavelength of mercury spectrum– spectrometer grating.
6. Determination of band gap of a semiconductor.

**Total Periods: 30****Text Books:**

**Engineering Mechanics**  
(Common to Mechanical, Mechatronics and Civil)

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>1</b>	<b>4</b>

**Pre – Requisites :** None

**Objectives:**

- To apply the laws of Mechanics to solve basic problems in day to day life.
- To develop capacity to predict the effect of force and motion in the course of carrying out the design functions of engineering.
- To develop the ability to understand the properties of surfaces and solids
- To apply the laws of friction to solve the simple life problems
- To develop the ability, in the engineering student, to understand the laws of motion and dynamic forces.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

- CO1** : Analyze the effect of forces, its magnitudes and direction
- CO2** : Analyze the rigid body in equilibrium
- CO3** : Evaluate the properties of surfaces and solids
- CO4** : Determine the frictional resistance and the effects by the laws of friction
- CO5** : Calculate dynamic forces exerted on rigid body

**Unit I Statics of Particles** **12**

Introduction to Mechanics – Fundamental Principles – Laws of Mechanics, Lame’s theorem, Parallelogram and triangular Law of forces, Coplanar forces – Resolution of forces –Equilibrium of particle in space.

**Unit II Statics of Rigid Bodies** **12**

Free body diagram – Types of supports and their reactions – Moments and Couples – Moment of a force about a point and about an axis – Varignon’s theorem – Single equivalent force -Equilibrium of Rigid bodies in two dimensions.

**Unit III Properties of Sections** **12**

Centroid - Rectangular, circular, triangular areas – T section, I section, Angle section, – Area moments of inertia of plane areas – Rectangular, circular, triangular areas by integration – T section, I section, Angle section, – Parallel axis theorem and perpendicular axis theorem –Principal moments of inertia of plane areas – Product of inertia and Mass moment of inertia of Cylinder, Cone and combination.

**Unit IV Dynamics of Particles and Friction** **12**

Displacements, Velocity and acceleration, their relationship – relative motion – Curvilinear motion - Projectiles– Newton’s law of motion – Work Energy Equation of particles – Impulse and Momentum – Impact of elastic bodies- Impact - direct and central impact – coefficient of restitution.

Friction - Characteristics and Laws of Dry friction - Problems involving dry and ladder friction.

**Unit V Dynamics of Rigid Bodies** **12**

General plane motion –Velocity and Acceleration- Absolute and Relative motion method - Equilibrium of rigid bodies in plane motion- D’Alembert’s Principle- Work Energy Principle-Principle of impulse momentum for rigid bodies in plane motion.

**Total Periods: 45**

<b>U19CSE01</b>	<b>Problem Solving and Python Programming</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	(Common to Mech, MCT and Civil)	<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**Pre – Requisites :** None

**Objectives:**

- To know the basics of algorithmic problem solving
- To read and write simple Python programs.
- To develop Python programs with conditionals and loops.
- To define Python functions and call them.
- To use Python data structures – lists, tuples, dictionaries.
- To do input/output with files in Python

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Develop algorithmic solutions to simple computational problems

**CO2** : Read, write, execute by hand simple Python programs

**CO3** : Structure simple Python programs for solving problems.

**CO4** : Decompose a Python program into functions.

**CO5** : Represent compound data using Python lists, tuples, and dictionaries.

**Unit I Problem Solving Techniques 9**

General problem Solving concepts:- Algorithm, Pseudo-code and Flowchart Problem Solving with Sequential Logic Structure - Problem Solving with Decisions - Problem Solving with Loops. Case Study: Raptor and Scratch Tools.

**Unit II Basics of Python Programming 8**

Features of Python, History of Python, The Future of Python, Literal Constants, Variables and Identifiers, Data Types, Input Operation, Comments, Reserved Words, Indentation, Operators and Expressions, Expressions in Python, Operations on Strings, Other Data Types, Type Conversion, String-String functions and methods.

**Unit III Decision Control Statements 9**

Introduction to Decision Control, Selection/Conditional Branching Statements, Basic Loop Structures/ Iterative Statements, Nested Loops, The break Statement, The continue Statement ,The pass Statement, The else Statement used with Loops. Case Study: Simple Calculator, Generating a Calendar.

**Unit IV Lists, Tuples, Dictionaries 10**

Sequence, Lists- Access Values in Lists, Updating Values in Lists, Nested Lists, Cloning Lists, Basic List Operations, List Methods , Looping in Lists , Tuple- Creating Tuple , Accessing Values in a Tuple , Basic Tuple Operations , Tuple Assignment ,Sets, dictionaries- Creating a Dictionary, Accessing Values, Adding and Modifying an Item in a Dictionary, Modifying an Entry, Deleting Items, Sorting Items in a Dictionary, Looping over a Dictionary, Nested Dictionaries.

**Unit V Functions, Modules and Packages 9**

Introduction, Function Definition, Function Call, Variable Scope and Lifetime, The return statement, Recursive Functions, Modules, Packages in Python, Standard Library modules. Case Study: Tower of Hanoi, Shuffling a Deck of Cards

**Total Periods: 45**

**List of Experiments:**

1. Draw Flowchart using Raptor Tool
  - a. Simple Flow Chart
  - b. Decision Making
  - c. Looping[ Pre test & Post test]
2. Create Animation / Gaming /Application using Scratch Tool
3. Programs on Operators and expressions.
4. Program using Decision Making Statement
5. Programs using Looping Statements
6. Programs on List (Searching, Sorting)
7. Programs on Tuple
8. Program on Dictionaries
9. Programs using Strings Operations
10. Program using Functions
11. Programs using Modules and Packages

<b>U19MEP01</b>	<b>COMPUTER AIDED DRAFTING AND MODELING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	<b>LABORATORY</b>				
	(Common to Mech, MCT and Civil)	<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Pre – Requisites :** If any

**Objectives:**

- To draw simple figures with title block using CAD software commands.
- To sketch curves like parabola, spiral and involute of square & circle and draw the orthographic projection of simple solids.
- To prepare orthographic projection of simple machine parts and draw a plan of residential building.
- To develop skill in sketching simple steel truss and sectional views of simple solids.
- To develop skill to use software to create 2D and 3D models.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

- CO1** : Sketch simple figures with title block using CAD software commands.
- CO2** : Sketch curves like parabola, spiral and involute of square & circle and draw the orthographic projection of simple solids.
- CO3** : Prepare orthographic projection of simple machine parts and draw a plan of residential building.
- CO4** : Sketch simple steel truss and sectional views of simple solids.
- CO5** : Prepare 2D multi view drawing from 3D model.

**List of Experiments:**

1. Study of capabilities of software for Drafting and Modeling – Coordinate systems (absolute, relative, polar, etc.) – Creation of simple figures like polygon and general multi-line figures.
2. Drawing of a Title Block with necessary text and projection symbol.
3. Drawing of curves like parabola, spiral, involute using Bspline or cubic spline.
4. Drawing of front view and top view of simple solids like prism, pyramid, cylinder, cone, etc, and dimensioning.
5. Drawing sectional views of prism, pyramid, cylinder, cone, etc,
6. Drawing front view, top view and side view of objects from the given pictorial views (eg. V- block, Base of a mixie, Simple stool, Objects with hole and curves).
7. Drawing isometric projection of simple objects.
8. Creation of 3-D models of simple objects and obtaining 2-D multi-view drawings from 3-D model.
9. Drawing of a plan of residential building (Two bed rooms, kitchen, hall, etc.)
10. Drawing of a simple steel truss.

**Total Periods: 30**

<b>U19MAT04</b>	<b>Transforms and Boundary Value Problems</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	<b>(Common to CIVIL,ECE,EEE,MECH,MCT)</b>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**PreRequisites** : Types of integration and differentiation

**Objectives:**

To make the students to

- Interpret the effective mathematical tools to solve several physical problems by applying the solutions of partial differential equations.
- Demonstrate the methodologies involved in solving many applications in engineering apart from its use in solving boundary value problems
- Exemplify the concepts of Fourier transform.
- Improve the ability in solving applications of partial differential equations.
- Understand the concepts of Z transform techniques for discrete time systems and to solve the difference equations.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

- CO1 :** Determine types of partial differential equations and to solve it.
- CO2 :** Explore the geometrical applications of Fourier series.
- CO3 :** Apply the knowledge of Fourier transform to compute the solution.
- CO4 :** Explore the basic concepts and solve partial differential equations for application in their field of engineering.
- CO5 :** Be exposed to the concepts to solve Z transform for application in the field of engineering.

**Unit I PARTIAL DIFFERENTIAL EQUATION 12(9+3)**

Formation of Partial Differential equation by elimination arbitrary constants and arbitrary functions, Solution of standard types of first order equations, Lagrange's equation, linear partial Differential equation of second and higher order with constant coefficients.

**Unit II FOURIER SERIES 12(9+3)**

Dirichlet's conditions, General Fourier series, Half Range Sine and Cosine series, Parseval's identity, Harmonic Analysis.

**Unit III FOURIER TRANSFORM 12(9+3)**

The infinite Fourier transform, sine and cosine transform, properties, inversion theorem, Parseval's identity and convolution theorem ( statement only)

**Unit IV BOUNDARY VALUE PROBLEMS 12(9+3)**

Classification of Second order linear partial differential equations, solutions of one-dimensional wave equation, one-dimensional heat equation, steady state solution of two dimensional heat equation, Fourier series solution in cartesian coordinates

**Unit V Z – TRANSFORMS 12(9+3)**

Definition and properties, Elementary Problems, convolution theorem (statement only), Inverse Z transforms (partial fraction method and residue method), Application of Z – Transforms in solving difference equations.

**Total Periods 60(45+15)**

**Text/Reference Books:**

1. B.S.Grewal (2001). Higher Engineering Mathematics. 42th Edition. Khanna Publishers,Delhi.

**U19CET01**

**Engineering Geology**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Pre-Requisites** : None

**Objectives:**

- At the end of this course the students will be able to understand the importance of geological knowledge such as earth, earthquake and volcanism.
- To apply geological knowledge in projects such as dams, tunnels, bridges, roads, airport and harbor as well as to choose types of foundation
- To impart knowledge about the methods used to explore the sub surface for natural resources.
- To understand the Engineering significance of the rocks.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 : Understand about geological formations of the Earth.
- CO2 : Identify the properties and uses of minerals.
- CO3 : Understand the Engineering properties of rocks.
- CO4 : Apply fundamental knowledge in structural geology like fault, fold and Joints.
- CO5 : Know the importance of the study of geology for Civil Engineers with regard to founding Structures like dams, bridges, buildings, etc.

**Unit I GENERAL GEOLOGY 9**

Interrelationship between Geology and civil engineering – Branches and scope of geology – Earth-surface features and internal structure – Weathering, wind, rivers and their Engineering significance – Volcano – Landforms, Plate tectonics – Earth quakes – Seismic zones in India.

**Unit II MINERALOGY 9**

Elementary knowledge on symmetry elements of important Crystallographic systems, Physical properties of minerals- Study of the following rock forming minerals – Quartz family, Felspar family, Augite, Hornblende, Biotite, Muscovite, Calcite, Garnet. Ore minerals – Haematite, Magnetite, Bauxite, Graphite, Magnetite – Clay minerals – Properties and Engineering significance.

**Unit III PETROLOGY 9**

Formation and classification of rocks – Igneous, Sedimentary and metamorphic rocks, their texture and structures, properties of granite, pegmatite, dolerite, and basalt, sandstone, limestone, shale, Quartzite, Marble, Slate, Gneiss and schist and Engineering Properties of Rocks.

**Unit IV STRUCTURAL GEOLOGY AND GEOLOGIC HAZARDS 9**

Attitude of beds Dip and Strike – Outcrops – types and classifications of folds, faults, joints, unconformities- Classification of natural hazards – Geologic hazards – Earthquakes – Landslides – Volcanism and Tsunami.

**Unit V APPLICATION OF GEOLOGICAL INVESTIGATIONS 9**

Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams, Reservoirs, Tunnels, and Road cuttings – Coastal protection structures. Investigation of Landslides, causes and mitigation

**Total Periods 45**

<b>U19CEE01</b>	<b>Mechanics of Deformable Bodies - I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**Pre-Requisites :** Engineering Mechanics

**Objectives:**

- To learn the fundamental concept of stresses and strains in engineering components as a result of different loading conditions.
- To know the concept of shear force and bending moment and draw the diagrams.
- To gain knowledge on shear force and bending stress distribution in different beams under various loads.
- To understand the deformation of shaft under torsion and deflection of closed helical springs.
- To impart knowledge on finding shear stresses and analysis of plane truss.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Evaluate the simple stresses and strains for one dimensional element subjected to axial loads.
- CO2 :** Examine the shear force, bending moment in various beams.
- CO3 :** Examine the shear stress of various beams under different loading conditions
- CO4 :** Examine the stresses induced in shaft and closed coil helical springs subjected to torsion.
- CO5 :** Evaluate the 2D stresses and forces in plane truss.

**Unit I STRESS AND STRAIN 9**

Stress and Strain at a point – Tension, Compression, Shear Stresses – Hooke’s law –Relationship among Elastic constants – Stress Strain Diagram for Mild Steel, TOR Steel, Concrete – Ultimate Stress – Yield Stress – Factor of Safety - Thermal Stresses – Thin Cylinders - Strain Energy due to Axial Force – Resilience – Stresses due to Impact and Suddenly Applied Load - Compound Bars.

**Unit II SHEAR FORCE AND BENDING MOMENT DIAGRAMS 9**

Types of beams-Supports and Loads, Shear force and Bending Moment Diagrams in beams, Cantilever, simply supported and overhanging beams - with concentrated loads, uniformly distributed and uniformly varying loads - Point of contra flexure.

**Unit III LOADS AND STRESSES IN BEAMS 9**

Theory of Simple Bending – Analysis of Beams for Stresses - Stress Distribution at a Cross Section due to Bending Moment and Shear Force for Cantilever, Simply Supported and Overhanging Beams with different loading conditions - Flitched Beams – Combined Direct and Bending Stresses – Strain Energy due to Flexure, Transverse Shear – Shear Stress Distribution.

**Unit IV TORSION 9**

Torsion of Circular and Hollow Shafts –Elastic Theory of Torsion - Stresses and Deflection in Circular Solid and Hollow Shafts – Stepped Composite Shafts - Combined Bending Moment and Torsion on Shafts – Strain Energy due to Torsion – Modulus of Rupture - Power Transmitted to a Shaft – Shafts and springs in Series and Parallel - Closed and Open Coiled helical Springs – Leaf Springs.

**Unit V COMPLEX STRESSES 9**

2D State of Stress -2D Normal and Shear Stresses on any plane – 2D Strain – Principal Stresses and Principal Planes – Principal Strains and Direction - Graphical Method. Analysis of Plane Trusses – Method of Joints – Method of Sections.

**Total Periods 45**

**LIST OF EXPERIMENTS:**

1. Find the hardness of the material using Rockwell and Brinell hardness tester.
2. Experimental study of an axial bar under tension to obtain the stress strain curve and the strength.
3. Determine the Young-modulus and stiffness of a metal beam through load deflection curve.
4. Experimentally calculate the compressive strength of the materials.
5. Experimental analysis of a bar under torsion to obtain stiffness and angle of twist.
6. Experimentally calculate the strain energy of a material subjected to impact loading.

**Practical hours: 30, Total hours: 45+30 = 75**

U19CET03

Fluid Mechanics

L	T	P	C
3	1	0	4

Pre-Requisites : None

**Objectives:**

- To understand the basic properties of the fluid.
- To identify the various types of fundamentals of fluid like Statics, Kinematics, Dynamics.
- To analyze and appreciate the complexities involved in solving the fluid flow problems.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

**CO1 :** Get a basic knowledge of fluids in static, kinematic and dynamic equilibrium.

**CO2 :** Understand and solve the problems related to equation of motion.

**CO3 :** Gain knowledge about dimensional and model analysis.

**CO4 :** Learn types of flow and losses of flow in pipes.

**CO5 :** Understand the terms of Boundary layer separation.

**Unit I FLUID PROPERTIES AND FLUID STATICS 11+3**

Fluid – definition, distinction between solid and fluid - Units and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, viscosity, compressibility, vapour pressure, capillarity and surface tension - Fluid statics: concept of fluid static pressure, absolute and gauge pressures – pressure measurements by manometers-forces on planes – centre of pressure – buoyancy and floatation.

**Unit II FLUID KINEMATICS AND DYNAMICS 9+3**

Fluid Kinematics – Classification and types of flow - velocity field and acceleration - continuity equation - stream line-streak line-path line- stream function - velocity potential function - flow net. Fluid dynamics - equations of motion -Euler's equation along a streamline - Bernoulli's equation – applications - venturi meter, orifice meter and Pitot tube.

**Unit III DIMENSIONAL ANALYSIS AND MODEL STUDIES 7+3**

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pitheorem - dimensionless parameters - similitudes and model studies - distorted models.

**Unit IV FLOW THROUGH PIPES 9+3**

Reynold's experiment - laminar flow through circular pipe (Hagen poiseulle's) - hydraulic and energy gradient – flow through pipes - Darcy - Weisbach's equation - pipe roughness -friction factor- Moody's diagram- major and minor losses of flow in pipes - pipes in series and in parallel.

**Unit V BOUNDARY LAYER 9+3**

Boundary layer – definition- boundary layer on a flat plate – laminar and turbulent boundary layer - displacement, energy and momentum thickness – Momentum integral equation-Boundary layer separation and control – drag on flat plate.

**Total Periods 60**

U19CEE02

**Engineering Surveying**

L	T	P	C
3	0	2	4

**Pre-Requisites** : None

**Objectives:**

- To understand basic principle and concepts of different surveying methods.
- To study the different surveying equipment's in the field of civil engineering.
- To illustrate the concepts of Control Surveying.
- To introduce the basics concept of Total station surveying.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** The use of various surveying instruments and mapping.
- CO2 :** Measuring Horizontal angle and vertical angle using different instruments.
- CO3 :** Methods of Leveling and setting Levels with different instruments.
- CO4 :** Concepts of astronomical surveying and methods to determine azimuth.
- CO5 :** Concept and principle of modern surveying.

**Unit I FUNDAMENTALS OF CONVENTIONAL SURVEYING AND LEVELLING 9**

Classifications and basic principles of surveying –Equipment and accessories for ranging and chaining – Compass – Types of Compass – Bearing – Types – True Bearing – Magnetic Bearing – Levelling– Principles of Levelling – Bench Marks – Temporary and Permanent Adjustments– Methods of Levelling– Reduction – Sources of errors in Levelling – Curvature and refraction correction.

**Unit II THEODOLITE AND TACHEOMETRIC SURVEYING 9**

Horizontal and vertical angle measurements –Temporary and permanent adjustments – Heights and distances – Tacheometer – Stadia Constants – Analytic Lens –Tangential and Stadia Tacheometry surveying – Contour – Contouring – Characteristics of contours – Methods of contouring –Uses of contour plan and map.

**Unit III CONTROL SURVEYING 9**

Horizontal and vertical control – Methods – triangulation – baseline – satellite stations – reduction to centre – traversing – Errors Sources – precautions and corrections – classification of errors – true and most probable values – weighed observations – normal equation – correlates– level nets– adjustment of simple triangulation networks.

**Unit IV CURVES AND ADVANCED TOPICS IN SURVEYING 9**

Simple curves - elements - Setting out of curves - Hydrographic Surveying: Tides - MSL - Sounding methods - Location of soundings and methods - Three point problem - River surveys - Measurement of current and discharge- astronomical Surveying- determination of Azimuth by altitude and hour angle methods- Celestial coordinate systems.

**Unit V MODERN SURVEYING 9**

Total Station: Advantages, working principle, Errors and Good practices in using Total Station –GPS: System components – Signal structure – receiver components – Planning and data acquisition – Data processing - Errors in GPS – Applications.

**Total Periods 45**

**LIST OF EXPERIMENTS:**

1. Chain Traversing.
2. Compass surveying.
3. Plane Table Surveying – Radiation, intersection, Traverse, Resection Leveling.
4. Setting out of curves.
5. Total station Surveying.

**Practical hours: 30, Total hours: 45+30 = 75**

<b>U19CEP01</b>	<b>Computer Aided Civil Engineering Drawing</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Pre-Requisites :** Engineering Graphics

**Objectives:**

- To make the students learn the various elements of Residential / Institutional / Workshop buildings
- To impart fundamental knowledge on AutoCAD and to make the students draw the Structures, the plan, elevation and sectional view of a building.
- To familiarize the students with Indian Standards on drawing practices and standard components.
- To draw the detailed drawing of given components.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

**CO1 :** Understand the various basic commands used for drafting and know the types of coordinate systems.

**CO2 :** To understand the principles of planning for various types of buildings by incorporating building bye laws.

**CO3 :** Prepare the plan by computer aided drawing ; arrange the components of building to satisfy the functional and orientation aspect.

**CO4 :** Sketch the detailed drawings of plan, elevation and section of a single storey residential building and list the schedule of joineries.

**CO5 :** Prepare the plan, elevation and section of residential, public and industrial buildings.

**Unit I INTRODUCTION 6**

Introduction – Uses of drafting in Auto CADD, Archicad and Sketch up software’s – Commands – Limits – Functionkeys – File management – Drawing commands

**Unit II PLANNING 9**

Basic principles of building planning – Scope of building planning – Arrangement of rooms, their position and purposes –object of drawing in building project

**Unit III DRAFTING AND DETAILING 15**

Plan of a single storeyed residential building - Drawing of a plan of residential building (Two bed rooms, kitchen, hall,etc.) – Electrical and plumbing layout of residential building & demo

**Unit IV BUILDING DRAWING – I 15**

Detailed working drawings of building components (doors and windows) - Roof Trusses - Staircases – Toilets –Foundation details of a building

**Unit V BUILDING DRAWING – II 15**

Elevation and cross section of a single storeyed residential building - Developing sections and elevations for a) Multi storeyed building b) Industrial building – Field applications.

**Total Periods 60**

**Text/Reference Books:**

S.No	Authir(s)	Title of the Book	Publisher	Year of Publication
1.	Bhavikatti S S and Chitawa M V	Building Planning	IK International Publishing House	2014
2.	Mark W Huth	Understanding Construction Drawings	Cengage Learning	2013

<b>U19MAT07</b>	<b>NUMERICAL METHODS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
	(Common to CIVIL & EEE)	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Pre-Requisites** : Concepts of integration and differentiation

**Objectives:**

- To provide the necessary basic concepts and procedures for solving numerically, different kinds of problems occurring in engineering and technology.
- The roots of nonlinear equations, solutions of large system and problem of matrix can be obtained numerically where analytical methods fail to give solution
- When huge amounts of experimental data are involved, the methods discussed on interpolation will be useful in constructing approximate polynomial to represent the data and to find the intermediate values.
- The numerical differentiation and integration find application when the function in the analytical form is too complicated or the huge amounts of data are given such as series of measurements, observations or some other empirical information.
- Since many physical laws are couched in terms of rate of change of one /two or more independent variables, most of the engineering problems are characterized in the form of either nonlinear ordinary differential equations or partial differential equations. The methods introduced in the solution of ordinary differential equations and partial differential equations will be useful in attempting any engineering problems.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

1. Analyze numerical techniques, ideas and would be able to demonstrate the applications of these techniques to problems drawn from industry, management and other engineering fields.
2. Solve geometrical applications using interpolation techniques.
3. Apply the numerical techniques to solve the differentiation and integration.
4. Analyze and solve ordinary differential equations for application in their field of engineering.
5. Explain how to find the solution of boundary value problems in ordinary and partial differential equations.

**Unit I NUMERICAL SOLUTION OF LINEAR EQUATIONS 9+3**

Solution of algebraic and transcendental equations– Newton Raphson method - Solution of linear system of equations - Gauss elimination method – Pivoting - Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel - Matrix Inversion by Gauss Jordan method.

**Unit II INTERPOLATION 9+3**

Interpolation with equal intervals – Newton’s forward and backward difference formulae, Interpolation with unequal intervals –Divided differences- Lagrange's interpolation.

**Unit III NUMERICAL DIFFERENTIATION AND INTEGRATION 9+3**

Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson’s 1/3 – Romberg’s method – Evaluation of double integrals by Trapezoidal and Simpson’s rules.

**Unit IV NUMERICAL SOLUTION OF ODE GIVEN INITIAL VALUES 9+3**

Ordinary differential equations: Initial value problems, Taylor series, Fourth order Runge - Kutta methods, Predictor Corrector methods, Milne’s and Adams Bashforth Method.

**Unit V SOLUTION OF BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 9+3**

Solution of two point boundary value problems in linear differential equations using finite difference method, One dimensional heat flow, Bender Schmidt recurrence relation, Crank Nicholson method, Liebmann procedure for Laplace and Poisson equations.

**Total Periods 45+15**

<b>U19CET02</b>	<b>Construction Materials and Technology</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Pre-Requisites** : Applied Chemistry

**Objectives:**

1. To learn the applications and testing procedures of materials used for construction.
2. To study the construction practices of different types of structural elements.
3. To understand the various types of doors, windows, plastering and paintings.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 : Choose the appropriate type of foundations for building construction.
- CO2 : Acquire knowledge on different masonry and plastering works.
- CO3 : Select the suitable type of floors, roofs, stairs and dampness preventing methods for practical applications.
- CO4 : Apply knowledge for selection of doors, windows paints and materials for buildings.
- CO5 : Understand the different construction practices existing in construction field.

**Unit I SUB STRUCTURE CONSTRUCTION 8**

Functions of foundation – Types of shallow and deep foundations – Piling techniques – Techniques of Box jacking – Pipe Jacking–Caissons and cofferdam – cable anchoring and grouting

**Unit II MASONRY AND PLASTERING 9**

**Stones** – Types – Characteristics–Stone masonry – Classification – Supervision of stone masonry.  
**Bricks** – Composition – types – BIS tests– Brick masonry – Classification – Supervision of brick masonry –  
**Concrete blocks** – Plastering – Materials and Methods of plastering – Types of plastering – Defects in plastering.

**Unit III FLOORING AND ROOFING 10**

**Cement** –**Sand** – River sand, M sand and Eco sand  
**Coarse aggregate** –Concrete – Floors – Requirements of good floor – Floor finishing materials – Classifications– Terrazzo flooring – Marble flooring – Cement concrete flooring – Tiled flooring – Damp Proof Course – Anti-termite treatment. Roofs– **Roofing materials** – Requirements –Types– Pitched roof –Flat roof – Flat and Ribbed slab. Stairs – Classifications of stairs – Ramps and Escalators.

**Unit IV DOORS, WINDOWS AND PAINTING 10**

**Timber**–Defects – Seasoning – Preservation – Laminated wood products – Properties – Types – **Fibre board** – Particle boards –Hard boards – **Aluminum products** – **UPVC** – **Glass** – Types – Properties – Applications.  
**Doors and Windows**–Types – Fixtures and Fastening – Ventilators. Painting –**Paints** –Classification of paints– Painting on new and old surfaces of steel, timber and masonry wall – Defects in painting. .

**Unit V CONSTRUCTION PRACTICES 8**

Centering and shuttering– Form work– Scaffolding –Structural steel and High Tensile Steel Properties – Types – Market forms of steel–Fabrication and erection of steel trusses – Frames– Launching girders.

**Total Periods 45**

<b>U19CET04</b>	<b>Mechanics of Deformable Bodies - II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Pre-Requisites :** Engineering Mechanics, Mechanics of Deformable Bodies - I

**Objectives:**

- To study the different methods of finding deflection of beam
- To analyse the Indeterminate beams and beam subject to unsymmetrical bending
- To understand the theory of elastic failures
- To analyze the column with different end conditions and stress in thick cylinders

**Course Outcomes:**

At the end of this course, the student will be able to

**CO1 :** To impart knowledge on behaviour of structural elements subjected to transverse load

**CO2 :** To analyse indeterminate beams for external loading's and support settlements.

**CO3 :** To learn about the load carrying capacity of columns.

**CO4 :** To understand the concept of unsymmetrical bending.

**CO5 :** To learn about the stresses in thick cylinder and study various theories of failure.

**Unit I DEFLECTION OF BEAMS 9**

Deflection Curve – Differential Equation – Determination of slope and deflection - Double Integration Method – Macaulay’s Method – Area Moment Method – Conjugate Beam Method.

**Unit II INDETERMINATE BEAMS 9**

Concept of Analysis – Propped Cantilever Beams – Fixed Beams and Continuous Beams – Theorem of Three Moments – Analysis of Continuous Beam – Shear Force and Bending Moment Diagrams.

**Unit III COLUMNS 9**

Members Subjected to Axial Load – eccentric load – Slenderness Ratio – End Conditions – Buckling Load for Columns- Euler’s Theory – Assumptions and Limitations – Rankine- Gordon Formula – Empirical Formula – Straight Line Formula – Columns Subjected to Eccentric Loading.

**Unit IV UNSYMMETRICAL BENDING 9**

Stresses due to Unsymmetrical Bending of Beams for Symmetrical Sections – Shear Centre - Definition – Shear Centre for Sections Symmetrical about One Axis – Moment of Inertia – Product of Inertia – Principal Area and Principal Moment of Inertia – Deflection of Beams due to Unsymmetrical Bending.

**Unit V THICK CYLINDERS AND ELASTIC FAILURE 9**

Lame’s Equation – Hoop Stress and Radial Stress Distribution – Compound Cylinders – Wire Wound Cylinders – Shrink Fit. Theories of Elastic Failure – Factor of Safety – Graphical Representation of Theories for Two-Dimensional Stress System.

**Total Periods 45**

<b>U19CEE03</b>	<b>Hydraulic Engineering</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>

**Pre-Requisites :** Fluid Mechanics

**Objectives:**

- To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines.
- The student should be able to relate the theory and practice of problems in hydraulic engineering.

**Course Outcomes:**

At the end of this course, the student will be able to understand

- CO1 :** The knowledge of fluid mechanics in addressing problems in open channels.
- CO2 :** To identify a effective section for flow in different cross sections.
- CO3 :** To solve problems in uniform, gradually and rapidly varied flows in steady state conditions.
- CO4 :** The principles, working and application of turbines.
- CO5 :** The principles, working and application of pumps.

**Unit I OPEN CHANNEL FLOW 9**

Uniform flow - Types of Flow - Properties of open channel - Velocity distribution in open channel - Steady uniform flow: Chezy equation, Manning equation - Best hydraulic sections for uniform flow – Wide open channel - Specific energy and specific force – Critical flow.

**Unit II GRADUALLY & RAPIDLY VARIED FLOW 9**

Dynamic equations of gradually varied flows – Types of flow profiles - Classifications: Computation by Direct step method and Standard step method – Application of the momentum equation for RVF - Hydraulic jumps - Types - Energy dissipation – Celerity – Rapidly varied unsteady flows (positive and negative surges).

**Unit III MOMENTUM PRINCIPLE 9**

Impact of jet on flat plate –Curved plates – Stationary and moving plates -Impulse momentum Principle – force exerted by a jet on normal, inclined and curved surfaces for stationary and moving vanes - Angular momentum principle - Inlet and outlet flow diagrams.

**Unit IV TURBINES 9**

Classification of Turbines –Working principle of Pelton wheel turbine– Working principle of Francis turbine – Working principle of Kaplan turbine –Types of efficiency - Specific speed – Characteristic Curves of Turbines- Draft tube and cavitation.

**Unit V PUMPS 9**

Classification of Pumps - Centrifugal pumps – Submersible pump - Work done - Minimum speed to start the pump - NPSH - Multistage pumps – Characteristics curve - Reciprocating pumps - Negative slip - Indicator diagrams and its variations – Air vessels - Savings in work done.

**Total Periods 45**

**LIST OF EXPERIMENTS:**

1. Calibration of Rotameter
2. Calibration of Venturimeter
3. Calibration of Orificemeter
4. Bernoulli's Experiment
5. Determination of friction factor in pipes
6. Determination of minor losses
7. Characteristics of Centrifugal pumps
8. Characteristics of Submersible pump
9. Characteristics of Reciprocating pump
10. Characteristics of Pelton wheel turbine
11. Characteristics of Francis turbine
12. Characteristics of Kaplan turbine

Geo-Technical Engineering – I

L	T	P	C
3	0	2	4

**PreRequisites** : Engineering Mechanics & Fluid Mechanics

**Objectives:**

- To understand the index and engineering properties of soil by using phase system.
- To gain knowledge on methods of soil classification, flow of water through soils and concept of effective stress.
- To understand the principles of consolidation and shear strength.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Classify the soil based on index properties and understand the compaction process
- CO2 :** Concept of effective and neutral stresses and the permeability of soils
- CO3 :** Evaluate the stress distribution due to external loads and consolidation settlement of clayey soils
- CO4 :** Compute the shear strength parameters of soils under different drainage conditions
- CO5 :** Analyze the stability of slopes and provide slope protection methods

**Unit I BASIC TERMINOLOGY AND INTERRELATIONS 9**

Origin and general types of soils - Phase system- Fundamental relationships by volume and weight – Index properties of soils – Sieve analysis – Sedimentation analysis – Atterberg limits - Identification and Classification of soils. Soil compaction - factors affecting compaction – field compaction methods and monitoring.

**Unit II SOIL WATER AND WATER FLOW 9**

Soil water - Capillary phenomena - Concept of effective stress, pore pressure and total stress - Permeability – Darcy’s law and coefficient of permeability - Determination of coefficient of permeability in the laboratory - Seepage flow - Head, gradient, pressure - steady state flow - flow net.

**Unit III STRESS DISTRIBUTION AND CONSOLIDATION 9**

Vertical stress distribution in soil - Boussinesq equation - New mark’s influence chart - Pressure bulb. Consolidation - Terzaghi's one dimensional consolidation theory – Determination of coefficient of consolidation – Square root of time fitting method – Logarithm of time fitting method.

**Unit IV SHEAR STRENGTH 9**

Shear strength of soils - Mohr - Coulomb failure criterion - Shear strength tests – Direct shear, Unconfined compression, Triaxial compression and vane shear tests - Different drainage conditions - Shear properties of cohesionless and cohesive soils.

**Unit V STABILITY OF SLOPES 9**

Types - Infinite slopes – Finite slopes – Stability analysis of infinite and finite slope – Factor of safety used in stability analysis of slopes – Fellenius method - Friction circle method – Use of stability number - slope protection measures.

**Total Periods 45**

**LIST OF EXPERIMENTS:**

1. Specific gravity of soil grains.
2. Grain size distribution - Sieve analysis & Sedimentation analysis
3. Atterberg limits test
4. Determination of moisture - Density relationship using standard Proctor test.
5. Permeability determination (constant head and falling head methods)
6. Field density test (Core cutter and sand replacement methods)
7. Direct shear test in cohesionless soil
8. Unconfined compression test in cohesive soil
9. Relative density of sands
10. Tri-axial compression test in cohesionless soil (Demonstration only)

**Practical hours: 30, Total hours: 45+30 = 75**

<b>U19MTT01</b>	<b>Environmental Science</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>0</b>

**Pre-Requisites :** Applied Chemistry

**Objectives:**

- To study the integrated themes and biodiversity, natural resources, pollution control and waste management.

**Course Outcomes:**

At the end of this course, the student will be able to

- CO1 :** To study the nature and facts about environment.
- CO2 :** To finding and implementing scientific, technological, economic and political solutions to environmental problems.
- CO3 :** To study the interrelationship between living organism and environment.
- CO4 :** To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.
- CO5 :** To study the dynamic processes and understand the features of the earth's interior and surface.

**Unit I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY 5**

Definition - scope of environment - concept of an ecosystem - structure and function of an ecosystem - producers, consumers and decomposers - ecological succession processes - Introduction, types, characteristic features, structure and function of the various ecosystems. Introduction to biodiversity- definition: genetic, species and ecosystem diversity - threats to biodiversity - endangered and endemic species of India - conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

**Unit II NATURAL RESOURCES 7**

Forest resources: Use and over - exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people -Water resources: Use and overutilization of surface and ground water - Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies - Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies - Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. Case studies: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

**Unit III ENVIRONMENTAL POLLUTION 7**

Definition – Sources, causes, effects and control measures of Water pollution : Physical and chemical properties of terrestrial and marine water and their environmental significance; Water quality parameters - physical, chemical and biological; absorption of heavy metals- Air pollution - Chemical and photochemical reactions in the atmosphere - Control of particulate and gaseous emission, Control of SOX, NOX, CO and HC- Soil pollution - causes, effects and control measures- Marine pollution- Noise pollution- Thermal pollution-Nuclear hazards-role of an individual in prevention of pollution.

**Unit IV SOCIAL ISSUES AND THE ENVIRONMENTAL LEGISLATION 6**

From unsustainable to sustainable development - urban problems related to energy - water conservation, rain water harvesting, water shed management - resettlement and rehabilitation of people; its problems and concerns- role of non-governmental organization- environmental ethics: Issues and possible solutions. Environment protection act - Air act - Water act - Wildlife protection act - Forest conservation act -The Biomedical Waste (Management and Handling) Rules; 1998 and amendments- scheme of labeling of environmentally friendly products (Eco mark). Disaster management: floods, earthquake, cyclone and landslides.

**Unit V ENVIRONMENT IMPACT ASSESSMENT 5**

Environmental impact analysis (EIA) - Environmental Impact Statement (EIS) - Legal and Regulatory aspects in India – Types and limitations of EIA - Terms of Reference in EIA- Issues in EIA - national – cross sectoral - social and cultural - Case studies of EIA of developmental projects.

**Total Periods 30**

U19CEP02

**Survey Camp**

L	T	P	C
0	0	6	3

**Pre-Requisites:** Engineering Surveying

**Objectives:**

The objective of the survey camp is to enable the students to get practical training in the field work. Groups of not more than six members in a group will carry out each exercise in survey camp. The camp must involve work on a large area of not less than 40 acres outside the campus. The camp record shall include all original field observations, calculations and plots.

**Course Outcomes:**

Apart from above students may be given survey exercises in other area also based on site condition to give good exposure on survey.

(During III Semester Summer Vacation) (2 Weeks)

Two weeks Survey Camp will be conducted during summer vacation in the following activities:

1. Triangulation
2. Trilateration and
3. Rectangulation
4. Contouring
  - (i) Radial tachometric contouring - Radial Line at Every 45 degree and Length not less than 60 meter on each Radial Line.
  - (ii) L.S & C.S - Road and canal alignment for a Length of not less than 1 Kilo meter at least L.S at Every 30 m and C.S at every 90 m.
5. Use of GPS to determine latitude and longitude and locate the survey camp location.
6. Traverse - Using Total station

<b>U19CET05</b>	<b>Design of R C Elements</b> <b>(IS 456 -2000 &amp; SP 16 codes are permitted)</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Pre-Requisites** : Mechanics of Deformable Bodies II

**Objectives:**

- To know the design philosophies of singly and doubly reinforced sections.
- To know the design of slabs and staircase.
- To understand the limit state design of flexural members.
- To know the behavior of RC beams in shear and torsion.
- To get the concepts of limit state design of columns and practice the design using AutoCAD.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1** : Illustrate the design principles of working stress method for beam
- CO2** : Design a type of slab and the staircase
- CO3** : Design of beam for various sections subjected to flexure as per the limit state method.
- CO4** : Design of beam for shear and determine the beam for deflection and crack.
- CO5** : Design of column subjected to axial, uniaxial and biaxial moment.

**Unit I WORKING STRESS METHOD 9+3**

Aims of design - Method of design - Working stress method - Assumptions - Stress strain behavior of steel and concrete - Stress block parameters - Design of singly and doubly reinforced rectangular sections by working stress method.

**Unit II LIMIT STATE DESIGN OF SLAB AND STAIRCASE 9+3**

Limit state method - Principles - Partial safety factor - Design of RC rectangular one- and two-way slabs subjected to uniformly distributed load by limit state method -Introduction to flat slab - Types of stairs - Design of stairs spanning horizontally - Design of doglegged stair.

**Unit III LIMIT STATE DESIGN OF BEAMS FOR FLEXURE 9+3**

Stress block parameters-Neutral Axis-Balanced-Under Reinforced-Over Reinforced Sections - Design of singly reinforced rectangular section - Design of doubly reinforced rectangular section - Design of flanged (T & L) beams.

**Unit IV LIMIT STATE DESIGN OF BEAMS FOR SHEAR 9+3**

Shear forces in beam - Types of shear resistance - Design of vertical stirrups - Design of Bent-up bars- Development length - Design of beams for flexure, shear and torsion (Combined effect) Parameters considered in limit state of serviceability - Check for deflection and crack width.

**Unit V LIMIT STATE DESIGN OF COLUMNS 9+3**

Types of columns - Provisions of IS-456 code for the design of columns - Design of short columns subjected to axial load, uniaxial and biaxial bending moment. Design of long column subjected to axial load.

**Total Periods 60 (45+15)**

<b>U19CET06</b>	<b>Structural Analysis I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Pre-Requisites** : Engineering Mechanics and Mechanics of Deformable Bodies I

**Objectives:**

- To impart the deflection in continuous beam, plane frame and truss.
- To understand the concepts of slope deflection method.
- To understand the concepts of moment distribution method.
- To give the knowledge about arches.
- To give the knowledge about influence line concept for beam.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Analyze continuous beams, pin-jointed indeterminate plane frames and rigid plane frames by strain energy method
- CO2 :** Analyse the continuous beams and rigid frames by slope deflection method.
- CO3 :** Understand the concept of moment distribution and analysis of continuous beams and rigid frames with and without sway.
- CO4 :** Analyse three and two hinged arches.
- CO5 :** Analyse the determinate and indeterminate beams with moving loads.

**Unit I STRAIN ENERGY METHOD 9**

Determination of Static and Kinematic Indeterminacies – Analysis of continuous beams, plane frames and indeterminate plane trusses by strain energy method (up to two degree of redundancy).

**Unit II SLOPE DEFLECTION METHOD 9**

Derivation of slope deflection equations - Application to Continuous beams and rigid frames (with and without sway) - Effect of Support displacements.

**Unit III MOMENT DISTRIBUTION METHOD 9**

Absolute and relative stiffness and carry over factors - Analysis of continuous beams - Plane rigid jointed frames with and without sway - Effect of settlement of supports - Nayler's simplification.

**Unit IV ARCHES 9**

Arches as structural forms - Examples of arch structures - Types of arches - Analysis of three hinged, two hinged and fixed arches having parabolic and circular shapes - Settlement and temperature effects.

**Unit V MOVING LOADS AND INFLUENCE LINES 9**

Influence Lines: Introduction - Construction of ILD for shear force and bending moment at a section - determination of load positions for maximum shear force and bending moments for simply supported and overhanging beams with several point loads and UDL and determination of their values - Sketching of absolute maximum BMD.

**Total Periods 60(45+15)**

<b>U19CET07</b>	<b>Geo-Technical Engineering – II</b> (IS Code 6403-1981 & 2911-1979 codes are permitted)	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Pre-Requisites** : Geo-Technical Engineering – I

**Objectives:**

- To impart fundamental knowledge on investigation of the site and selection of suitable foundation.
- To evaluate the bearing capacity and settlement of foundations.
- To impart knowledge on the design concepts of different types of foundations.
- To calculate the load carrying capacity of pile and pile groups and to design pile foundation.
- To improve the knowledge of earth pressure.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Conduct site investigation and prepare the report for selection of foundation
- CO2 :** Compute the bearing capacity and settlement of soil
- CO3 :** Evaluate the size of shallow foundations
- CO4 :** Estimate the load carrying capacity of piles and settlement of pile groups
- CO5 :** Analyse the lateral earth pressure on retaining wall

**Unit I SITE INVESTIGATION AND SELECTION OF FOUNDATION 9**

Scope and objectives-Methods of exploration- Depth and spacing of bore holes - Sampling of soil – Methods of sampling -Penetration tests (SPT, SCPT and DCPT)-Bore log report – Types & Selection of foundation - Requirements of good foundation – Factors governing location and depth of foundation.

**Unit II BEARING CAPACITY AND SETTLEMENT 9**

Bearing capacity of shallow foundation on homogeneous deposits - Terzaghi's formula and BIS formula - Bearing Capacity from insitu tests (SPT, SCPT and Plate load) - Settlement - Components of settlement - Determination of settlement of foundations on granular and clay deposits.

**Unit III FOOTINGS AND RAFT 9**

Types of footings – Contact pressure distribution: Isolated footing – Combined footings – Types and Proportioning – Mat foundation – Design of mat foundation.

**Unit IV PILE FOUNDATION 9**

Types of piles and their function - Factors influencing the selection of pile - Carrying capacity of single pile in granular and cohesive soil - Static formula - dynamic formulae (Engineering news and Hiley's) - Interpretation with in situ tests (SPT, SCPT and Pile load test) - Negative skin friction - Group capacity by different methods (Feld's rule and block failure criterion) - Settlement of pile groups.

**Unit V EARTH PRESSURE 9**

Active and passive earth pressure - Rankine's theory - Coloumb's wedge theory - Earth pressure on retaining walls including the effect of surcharge for c and c-phi soil under dry and saturated conditions.

**Total Periods 60(45+15)**

<b>U19MTT02</b>	<b>Indian Constitution</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>0</b>

**Pre-Requisites** : Nil

**Objective:**

Students will be able to

- Understand the historical background of the constitutional making and its importance for building a democratic India, the structure of Indian government, the structure of state government, central and state relation, the local Administration and about the functions of Election commission.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Understand the emergence and evolution of Indian Constitution.

**CO2** : Acquire knowledge about the structure and composition of Indian Constitution

**CO3** : Understand and analyze federalism in the Indian context

**CO4** : Analyse Panchayat Raj institutions as a medium of decentralization

**CO5** : Acquire knowledge about the Indian election commission

**Unit I THE CONSTITUTION - INTRODUCTION 6**

The History of the Making of the Indian Constitution -Preamble and the Basic Structure, and its interpretation -Fundamental Rights and Duties and their interpretation -State Policy Principles

**Unit II UNION GOVERNMENT 6**

Structure of the Indian Union -President – Role and Power-Prime Minister and Council of Ministers - Lok Sabha and Rajya Sabha

**Unit III STATE GOVERNMENT 6**

Governor – Role and Power -Chief Minister and Council of Ministers -State Secretariat

**Unit IV LOCAL ADMINISTRATION 6**

District Administration -Municipal Corporation -Zila Panchayat

**Unit V ELECTION COMMISSION 6**

Role and Functioning -Chief Election Commissioner -State Election Commission

**Total Periods: 30**

<b>U19CEP03</b>	<b>Water &amp; Waste Water Engineering Laboratory</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Pre-Requisites :** Water supply engineering & Waste Water Engineering

**Objectives:**

- To understand the sampling procedures of water and waste water samples
- To impart knowledge on preparation of reagents, testing various water and waste water quality parameters.
- To conduct laboratory tests on characterization of water/wastewater samples.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Test the physical properties of water and waste water.
- CO2 :** Test the chemical properties of water and waste water
- CO3 :** Test the biological properties of water and waste water.
- CO4 :** To analyze water and wastewater volumetrically and using certain equipments.
- CO5 :** Understand sampling and preservation methods of water and wastewater.

**LIST OF EXPERIMENTS**

1. Sampling and preservation methods for water and wastewater (Demonstration only).
2. Determination of pH and Electrical conductivity
3. Determination of Turbidity
4. Determination of Total Hardness
5. Determination of Alkalinity
6. Determination of Acidity.
7. Determination of Chlorides
8. Determination of Sulphates
9. Determination of Iron and Fluoride
10. Determination of Optimum Coagulant dosage
11. Determination of Residual chlorine and Available chlorine in bleaching powder.
12. Determination of suspended, settleable, volatile and fixed solids
13. Determination of Dissolved Oxygen for the given sample.
14. Determination of TOC for the given sample.
15. Determination of Total Nitrogen for given sample.

**Total Periods 60**

**Structural Analysis II**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Pre-Requisites** : Structural Analysis I

**Objectives:**

- To learn the method of drawing influence lines in various applications like beams.
- To understand the concepts of analysis of cables and suspension bridges.
- To impart knowledge on matrix stiffness method.
- To impart knowledge on matrix flexibility method.
- To learn Plastic analysis of beams and rigid frames.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

**CO1 :** Analyse the indeterminate beams with rolling loads.

**CO2 :** Solve the problems on cables and suspension bridges.

**CO3 :** Analyse beams, frames and trusses by flexibility methods.

**CO4 :** Analyse beams, frames and trusses by Stiffness methods.

**CO5 :** Understand the concept of Plastic analysis and the method of analyzing beams and rigid frames.

**Unit I INFLUENCE LINES FOR INDETERMINATE BEAMS 9+3**

Muller Breslau's principle– Influence line for Shearing force, Bending Moment and support reaction components of propped cantilever, continuous beams (Redundancy restricted to one), and fixed beams.

**Unit II CABLES AND SUSPENSION BRIDGES 9+3**

Components and their Functions - Analysis of cable under concentrated loads and UDL - Shape of cable under self-weight - Anchorage of suspension cables - Bending Moment and Shear Force in suspension bridges with three hinged stiffened girders - Max Bending Moment due to moving single concentrated load and UDL - Influence lines for Bending Moment and Shear Force - Analysis of suspension bridges with two hinged stiffening girders.

**Unit III MATRIX FLEXIBILITY METHOD 9+3**

Introduction - Computation of flexibility matrices - Analysis of continuous beams, indeterminate frames and trusses with maximum two degrees of static indeterminacy.

**Unit IV MATRIX STIFFNESS METHOD 9+3**

Introduction - equilibrium and compatibility - Analysis of continuous beams, indeterminate frames and trusses with maximum two degrees of kinematic indeterminacy.

**Unit V PLASTIC ANALYSIS 9+3**

Plastic theory - Statically indeterminate structures – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism – collapse load - Static and kinematic methods – Upper and lower bound theorems - Plastic analysis of indeterminate beams and frames.

**Total Periods 60 (45+15)**

<b>U19CET09</b>	<b>Structural Design - Steel</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**Pre-Requisites** : Nil

**Objectives:**

- To introduce the students to limit state design of structural steel members subjected to compressive, tensile and bending loads, including connections.
- Design of structural systems such as roof trusses, gantry girders as per provisions of current code (IS 800 - 2007) of practice.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** To design the tension and compression steel elements and their connections.
- CO2 :** To understand the behavior and design of tension members.
- CO3 :** To understand the behavior and design of beams.
- CO4 :** To understand the behavior and design of compression members.
- CO5 :** To familiarize and design the components of industrial buildings.

**Unit I SIMPLE STEEL CONNECTIONS 9+3**

Properties of steel – Structural steel sections – Limit State Design Concepts – Loads on Structures – Connections using rivets, welding, bolting – Design of bolted and welded joints – Eccentric connections - Efficiency of joints.

**Unit II ECCENTRIC CONNECTIONS AND TENSION MEMBER 9+3**

Types of sections – Net area – Net effective sections for angles and Tee in tension – Design of connections in tension members – Use of lug angles – Design of tension splice – Concept of shear lag.

**Unit III COMPRESSION MEMBERS 9+3**

Types of compression members – Theory of columns – Basis of current codal provision for compression member design – Slenderness ratio – Design of single section and compound section compression members – Design of laced and battened type columns – Design of column bases – Gusseted base.

**Unit IV BEAMS 9+3**

Design of laterally supported and unsupported beams – Built up beams – Beams subjected to uniaxial and biaxial bending – Design of plate girders - Intermediate and bearing stiffeners – Flange and web splices.

**Unit V ROOF TRUSSES AND INDUSTRIAL BUILDINGS 9+3**

Roof trusses – Roof and side coverings – Design of purlin and elements of truss; end bearing – Design of gantry girder.

**Total Periods 60**

		<b>0</b>	<b>0</b>	<b>2</b>	<b>1</b>

**Pre-Requisites** : Design of R C Elements & Structural Design - Steel

**Objectives:**

- To acquire hands on experience in design and preparation of structural drawings for concrete / steel structures normally encountered in Civil Engineering practice.
- To enhance the capability of the students to draw the plan, elevation and sectional view of various RCC structural elements using AutoCAD software.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** At the end of the course the student acquires hands on experience in design
- CO2 :** Preparation of structural drawings for concrete/steel structures normally encountered in Civil Engineering practice.
- CO3 :** To impart a thorough knowledge on the computer aided analysis and design of RCC structural components using manual and software.

**LIST OF EXPERIMENTS**

- 1 Design and detailing of Cantilever retaining wall
- 2 Design and detailing of Counterfort retaining wall
- 3 Design and drafting of circular and rectangular RCC water tanks
- 4 Design and detailing of Reinforced Concrete T Beam Bridge Deck bridges for IRC loading
- 5 Design and detailing of Gantry Girder
- 6 Design and detailing of Plate Girder Bridge
- 7 Design and detailing of Roof Trusses

<b>U19CEP05</b>	<b>Concrete and Highway Engineering Laboratory</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Pre-Requisites** : Concrete Technology & Transportation Engineering

**Objectives:**

- To impart basic knowledge on the preliminary tests of the concrete ingredients.
- To provide knowledge on the tests to be conducted on fresh and hardened concrete
- To learn the principles and procedures of testing Concrete and Highway materials and to get hands on experience by conducting the tests and evolving inferences.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Determine the prescribed limits of ingredients as per IS standards for concrete making.
- CO2 :** Demonstrate the workability property of freshly made concrete.
- CO3 :** Compute the strength property of hardened concrete
- CO4 :** Conduct quality control tests on bitumen.
- CO5 :** Gain knowledge about Bitumen mix design.

**LIST OF EXPERIMENTS**

1. Test on specific gravity of coarse aggregates.
2. Test on water absorption capacity of coarse aggregates.
3. Test on Gradation of Aggregate.
4. Aggregate Crushing value test.
5. Aggregate Impact value test.
6. Aggregate Abrasion Value test.
7. Flakiness and Elongation Index Test.
8. Mix proportion of concrete: Mix design as per BIS method.
9. Determination of workability of fresh concrete by compaction factor method.
10. Determination of workability of fresh concrete mix by conducting slump test.
11. Determination of workability of concrete mix by the use of Flow table.
12. Determination of workability of concrete by conducting the Vee-Bee consistency test.
13. Determination of compressive strength - cube and cylinder.
14. Determination of flexural strength of concrete beam.
15. Modulus of elastics for the hardened concrete.
16. Penetration test on Bitumen.
17. Softening Point test on Bitumen.
18. Ductility test on Bitumen.
19. Determination of Binder Content.
20. Marshal Method of Mix Design.

<b>U19CET10</b>	<b>Estimation and Quantity Surveying</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Pre-Requisites** : 1.Construction Materials and Technology.  
2 .Computer Aided Civil Engineering Drawing

**Objectives:**

- To provide the student with the ability to estimate the quantities of item of works involved in buildings,
- Water supply and sanitary works, road works and irrigation works, and also to equip the student with the ability to do rate analysis,
- Valuation of properties and preparation of reports for estimation of various items.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 : Compute quantities of various items for load bearing and framed structures
- CO2 : Calculate the quantities of various items for other structures
- CO3 : Analyses the rates for various items of works
- CO4 : Carry out valuation of plots and buildings
- CO5 : Prepare tenders, contract documents and reports as per norms

**Unit I ESTIMATION OF BUILDINGS 10**

Types of estimates - Units of measurements - Methods of estimates - Load bearing and framed structures - Calculation of quantities of various items for residential and Industrial building with flat roof - Bar bending schedule - Various types of arches - Calculation of brick work in arches.

**Unit II ESTIMATE OF OTHER STRUCTURES AND SPECIFICATION 10**

Estimating of septic tank, soak pit – sanitary and water supply installations – water supply pipe line – sewer line – estimate of bituminous and cement concrete roads –retaining walls – culverts- Specifications – Detailed and general specifications – Constructions – Types of specifications.

**Unit III RATE ANALYSIS AND COSTING 8**

Rate for material and labour - Rate analysis for stone masonry, brick masonry, concreting, plastering and tiles laying - PWD Schedule of rates.

**Unit IV VALUATION 8**

Basics of valuation - Capitalized value - Factors affecting the value of plot and building - Depreciation - Valuation of residential building - Escalation - Calculation of standard rent –Mortgage-Lease.-GST Rate for Construction and Building Materials.

**Unit V TENDERS AND REPORT PERPARATION 9**

Tenders -Tamilnadu Tender Transparency Act - e-tender - Preparation of Tender Notice and Document - Contracts - Types of contracts - Drafting of contract documents-Arbitration and legal requirements.- Principles for report preparation – Report on estimate of residential building - Culvert - Roads - Water supply and sanitary installations.

<b>U19MGT02</b>	<b>TOTAL QUALITY MANAGEMENT</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Pre-Requisites** : NIL

**Objectives:**

- To make the students understand the basic concepts of TQM and appreciate its importance in today's business environment.
- To enable them to acquire required diagnostic skills and use various quality tools.
- To familiarize the students about the Quality Management System.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

**CO1** : Able to understand the dimensions of quality.

**CO2** : Capable of applying TQM concepts for improving the quality of products and services.

**CO3** : Assess the process approach in TQM .

**CO4** : Use tools and techniques of TQM for continuous improvement in quality.

**CO5** : Implement Quality Management System.

**Unit I INTRODUCTION 9**

Introduction and basic concepts - Definition of quality - Dimensions of quality - Evolution of TQM - TQM framework – Barriers to TQM

**Unit II TQM IMPLEMENTATION 9**

Leadership for TQM - Deming's quality principle - TQM implementation - PDCA cycle - Quality Circles - Quality Council - Supplier Partnership.

**Unit III PROCESS APPROACH TO TQM 9**

Process approach - Juran's Trilogy - Taguchi's loss function – Kaizen - Quality by design - 5S - ESI (Early Supplier Involvement) 5M.

**Unit IV TOOLS AND TECHNIQUES 9**

7 Old quality control tools - Bench marking - Total productive maintenance - Failure mode and effect Analysis – POKAYOKE - Six Sigma.

**Unit V QUALITY MANAGEMENT SYSTEMS 9**

Management systems for TQM - ISO 9000 & 14000 Quality management systems - Auditing and certification Process - Korean and American QMS Quality Awards.

**Project Work Phase I**

<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>

**Pre-Requisites** : All Civil Engineering Subjects

**Objectives:**

- The objective of this course is to impart and improve the design capability of the student. This course conceives purely a design problem in any one of the disciplines of Civil Engineering; e.g., Design of an RC structure, Design of a waste water treatment plant, Design of a foundation system, Design of traffic intersection etc.
- The design problem can be allotted to either an individual student or a group of students comprising of not more than four. At the end of the course the group should submit a complete report on the design problem consisting of the data given, the design calculations, specifications if any and complete set of drawings which follow the design.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Identify Civil Engineering Analytical Problems based on present scenario.
- CO2 :** Understand the IS Codes & Develop the general arrangement drawings.
- CO3 :** Do detailed Analysis/Modeling, produce detailed design & drawings.
- CO4 :** Produce a bill of quantities and calculate approximate project cost.
- CO5 :** Prepare the final detailed project Phase I report.

**EVALUATION PROCEDURE**

The method of evaluation will be as follows:

**1. Internal Marks : 20 marks**

(Decided by conducting 3 reviews by the guide appointed by the Institution)

**2. Evaluation of Project Report : 30 marks**

(Evaluated by the external examiner appointed the University).

Every student belonging to the same group gets the same mark

**3. Viva voce examination : 50 marks**

(Evaluated by the internal examiner appointed by the HOD with the approval of HOI, external examiner appointed by the University and Guide of the course – with equal Weight age).

**60**

**Total Periods 60**

<b>U19MGT01</b>	<b>PRINCIPLES OF MANAGEMENT AND ETHICS</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>3</b>

**Pre-Requisites** : NIL

**Objectives:**

- To help the students gain understanding of the functions and responsibilities of managers.
- To provide them tools and techniques to be used in the performance of the managerial job.
- To enable them to analyze and understand the environment of the organization.
- To enable the students to create an awareness on Engineering Ethics and Human Values to instill Moral and Social Values and Loyalty and to appreciate the rights of others.

**Course Outcomes:**

At the end of this course students will demonstrate the ability to

- CO1** : Describe the basic of management and its types, skills, management roles, types of business organization and current trends in business.
- CO2** : Explain the nature and purpose of planning, objectives of planning and decision process. Compare the different organization structures, human resource management and training and development
- CO3** : Estimate the individual and group behavior, motivation, job satisfaction types and theories of leadership, Apply the knowledge using the various system and process of controlling, budgetary and non-budgetary control techniques.
- CO4** : Understanding basic purpose of profession, professional ethics and various moral and social issues.
- CO5** : Acquiring knowledge of various roles of Engineer In applying ethical principles at various professional levels

**Unit I INTRODUCTION TO MANAGEMENT 6**

Definition and functions of Management – types of managers – managerial roles and skills – Evolution of Management – Scientific, human relations, system and contingency approaches.

**Unit II PLANNING AND ORGANISING 10**

Nature and purpose of planning – planning process – types of planning – Planning Tools and Techniques – MBO – Decision making steps and process – organizing process – organization structure – Departmentation – Human Resource Management – HR Planning, Recruitment, selection, Training and Development.

**Unit III DIRECTING AND CONTROLLING 10**

Motivation – motivation theories – motivational techniques – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication System – budgetary and non-budgetary control techniques – use of computers and IT in Management control – direct and preventive control.

**Unit IV HUMAN VALUES 10**

Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

**Unit V ENGINEERING ETHICS 9**

Senses of ‘Engineering Ethics’ – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg’s theory – Gilligan’s theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

U19CEJ02

**Project Work Phase II**

L	T	P	C
0	0	16	8

**Pre-Requisites** : All Civil Engineering Subjects

**Objectives:**

- To enable the student to take up investigative study in the broad field of Civil Engineering, either fully Theoretical/Practical or involving both Theoretical and Practical work.
- To develop the ability to review the literatures.
- To illustrate their expertise in a chosen area.

**Course Outcomes:**

At the end of this course, students will demonstrate the ability to

- CO1 :** Identify Specific Civil Engineering area and work for the real life needs.
- CO2 :** Familiarize with the Standard Codes for specific Civil Engineering works.
- CO3 :** Apply latest techniques to analyze, Modeling & Simulation work
- CO4 :** Give practical solutions to Civil Engineering Problems.
- CO5 :** Prepare the final detailed report.

**COURSE CONTENT:**

It will be assigned by the Department for maximum of four students in a group, under the guidance of a Supervisor. During this period the students shall receive directions from the Supervisor for the progress of the Project Work.

The students shall give periodical presentations of the progress made in the Project Work. Each student shall finally produce a comprehensive report. This final report shall be typewritten form as specified in the guidelines.

The Project Work shall be carried out in any of the Civil Engineering areas such as Construction Engineering, Structural Engineering, Environmental Engineering, Water Resources Engineering, Transportation Engineering, Geo Technical Engineering and Remote sensing.

**180**

The Project Work includes:

- \* Review and finalization of the Approach to the Problem
- \* Preparing an Action Plan for conducting the investigation, including team work
- \* Detailed Analysis/ Modelling /Simulation/Design/Problem Solving/Experiment as needed
- \* Final development of product/process, testing, results, conclusions and future directions
- \* Preparing a paper for Conference presentation/Publication in Journals, if possible
- \* Preparing a Dissertation in the standard format for being evaluated by the Supervisor
- \* **Final Seminar Presentation before a Departmental Committee**

**Total Periods 180**
